JULY

2017

Thrush Aircraft delivers 100th 510G.

Major milestone reached as GE-powered agricultural aircraft continues to be a favorite with both pilots and operators worldwide.

For Immediate Release

May 24, 2017

Thrush Aircraft Company

(Albany, GA) As the Thrush factory's large delivery hangar doors slid open to begin another day – a new 510G sat at the front of the space, sunlight glinting off its wings. Although the aircraft's distinctive red and white company livery looked similar to other 510G's coming off the assembly line, this one was quite special – as it was the 100th 510G to be completed by Thrush since the aircraft received FAA certification in 2012.

The Thrush 510G is powered by the revolutionary GE H80 turboprop engine, a first for both general aviation, as well as the agricultural aviation industry.

The H80 is lighter, more powerful, and more fuel efficient than competitive engines, and it has the ability to produce its full-rated 800 shp at high altitudes and field elevations. Combined with the Thrush 510 airframe and designated the Thrush 510G, the aircraft has quickly become a favorite among pilots – especially those working in hot and high conditions. And, with its higher cruise speeds for increased productivity, no hot section inspection

requirement, and a TBO of 3,600 hours, it has proven to be extremely popular with operators as well.

Thrush 510G's are now working in twelve countries worldwide, and the fleet has accumulated over 63,000 flight hours to date.

The 100th Thrush 510G is being delivered to Mid-Continent Aircraft Corporation in Hayti, Missouri where it will quickly be put into service beginning with this year's spring and summer spray seasons. In addition to providing aerial application services to growers and ranchers in the region, Mid-Continent is also a highly regarded factory-authorized Thrush dealer and service center. Agricultural aviation legend Dick Reade founded Mid-Continent Aircraft in 1949, and continues at the company's helm today.

"I couldn't think of a better person to receive our 100th 510G than Dick Reade," said Payne Hughes, president of Thrush Aircraft. "Not only has his company and its staff provided our customers with outstanding support over the years – but his observations and advice have been invaluable to me and to Thrush as we've grown the company and our

product line to meet the needs of agricultural aviation operators worldwide" he continued.

Like its sister aircraft, the Thrush 510P, the 510G has a hopper capacity of 500 gallons, a certified gross operating weight of 10,500 pounds, and is available in both single and dual cockpit configurations. Research and development of the aircraft and its GE engine continues at the factory, with additional refinements anticipated in the years ahead.

"We're very proud of the relationship between GE Aviation and Thrush," said Mr. Hughes. "Both of our companies are committed to continuing to bring the best flying, most highly advanced, and most capable aircraft to the agricultural aviation industry," he continued. "The first 100 510Gs have proven to be every bit of that and more," he added, "and I can promise the next 100 will be even better."

**Storm
CUTTERS**

These FAA approved STC (#SA01745WI) wire cutters are the newest advancement in wire cutter technology. Three years of research and devel-

opment have gone into this unique design to create a safer platform for both plane and pilot. The blade has been heat treated to a level of 61 Rockwell Hardness which would be equal to the hardness of a file or chisel. Spacer blocks have been positioned at five points along the blade to increase strength and stabilize the blade in case of a wire strike. Adel clamps positioned along the trailing edge of the landing gear secure the brake line and do away with the standard black zip ties currently used to secure the brake line.

Storm Cutters are now available for every model of Air Tractor from the 300 through the 800 series. This is yet another advancement in safety for the ag aviation industry. Cutters are currently available in stock.
