Dick Reade:

A View From The Top

by JOSH RITTENBERRY

Less than a generation removed from the end of the war that was supposed to end all wars, another simmered on two fronts. At risk from the east and the west, America of the late 1930s and early 1940s was deeply hesitant to get involved in skirmishes on foreign soil.

The horrors of World War I were a not-so-distant memory still seared in the United States' collective consciousness. And after all, there were more serious problems at home. The bruising effects that the Great Depression had on every aspect of Americans' lives left little to no appetite for war. The economy was gutted, unemployment and homelessness soared, the 10-year-long Dust Bowl had wiped out large swaths of once fertile farmland. The American Dream, which bore the fruits that gave the 1920s their roar went out like a whimper as the decade turned the page, transforming that dream into a desolate nightmare.

It was during this time of great uncertainty that Richard

"Dick" Reade was certain of a dream of his own: aviation. The son of a stockbroker and a homemaker, Dick Reade grew up in the Hudson Valley of New York, graduating from Scarsdale High School. Although flying had always been an inherent interest of his, it was the unique vocation of animal husbandry that took him away from the east coast and landed him as a freshman at Iowa State University, an ideal place to study as the agriculturally-centric Ames campus had been originally established as a state agriculture college and model farm. Dick Reade dug into his studies there with his ever-present vigor as the goal of raising and farming cattle out west—a place far removed from the Hudson Valley—was on track to becoming a reality, fulfilling—at least for himself—a small piece of that American Dream.

But then came that day of infamy.

SERVICE • KNOWLEDGE • INTEGRITY • EXPERIENCE

December 7, 1941 forever altered the trajectory of an entire generation digging out of the slog of the Depression. Dick Reade was not immune from the precipitous effects of war. His course, too, was also changed forever. While at Iowa State, he had nourished his appetite for flying and secured a spot in the university's aviation department, soloing after seven hours before finally earning his private license in the program's Cessna 140.

As war broke out, on hold—at least in the near future—were dreams of cattle farming. In its place was a spark that lit the flame of instinctive duty, a call to arms. This was not a time for the self-indulgence of youth. His country needed him now more than ever.

To be continued in the new e-newsletter launching in April.
